Senior Backend Engineer and Technical Lead with 11+ years building and scaling backend systems in Go and Node.js across startups and established companies in Indonesia, Singapore, and Malaysia. Deep expertise in distributed systems, API design (REST, GraphQL, event-driven), and cloud infrastructure (GCP, AWS). Shipped a customer-facing AI assistant to production and works AI-native day to day, using Claude Code across the SDLC while reviewing its output critically rather than trusting it. Track record of reducing downtime by ~30%, cutting infrastructure costs by ~30%, and mentoring engineers while owning business-critical systems end to end.

Core Competencies

- **Go (Golang) & Node.js/TypeScript:** production services in Go (Fiber) and TypeScript (Express.js, NestJS); Nest JS Zero to Hero - Modern TypeScript Backend Development certification, January 2026
- **AI & Agentic Engineering:** shipped a customer-facing AI assistant to production; Claude Code as a daily working method across the SDLC; built a LangChain deep-agent with tool-calling subagents
- **API & Distributed System Design:** REST, GraphQL, message queues and event-driven processing (RabbitMQ); clean layered architecture (handler-service-repository) with dependency injection
- **Data & Search:** PostgreSQL query optimisation and indexing, Redis caching that cut database queries ~50%; SQL & NoSQL, Firebase, search infrastructure (Meilisearch)
- **Cloud & Infrastructure:** Google Cloud Platform (GCP), AWS; stack modernisation that cut annual infrastructure costs ~30%
- **Testing & Code Quality:** introduced automated testing to a legacy codebase, raising coverage to ~90% and cutting regressions ~50%; code review practice that reduced bugs ~30%
- **Technical Leadership:** mentoring, coding standards and API contracts, cross-functional delivery (SDLC) with product, frontend, and QA, and SLA-bound production support

Professional Experience

- **Kirimfresh.id** **Indonesia**
Technical Lead *Mar 2025–Aug 2026*
 - Architected and built the production backend in Go (Fiber), PostgreSQL, Redis, RabbitMQ, and Meilisearch, applying a clean layered handler-service-repository architecture with dependency injection
 - Built a customer-facing AI assistant handling recipe search, nutrition questions, product lookups, and general customer support
 - Designed RESTful APIs and event-driven processing (RabbitMQ) for order events, delivery tracking, and notifications, integrating payment gateways, Firebase FCM, and third-party APIs
 - Led technical decision-making on architecture, infrastructure, and performance, and owned the end-to-end delivery lifecycle (SDLC) through release management
 - Defined and enforced coding standards, API contracts, and development workflows, and acted as the bridge between engineering and business stakeholders
- **Silentmode Sdn. Bhd.** **Remote, Malaysia**
Senior Software Engineer *Aug 2024–Jul 2026*
 - Designed and delivered scalable backend services for a fully remote team, contributing to architecture decisions on scalability and performance under load
 - Led code reviews and mentored junior engineers, raising code quality and long-term maintainability across services
 - Provided production support within SLA, performing root-cause analysis to reduce recurring customer issues

- **TreeDots Pte. Ltd.** **Remote, Singapore**
Senior Backend Engineer *Aug 2022–Mar 2024*
 - Diagnosed and resolved critical production issues, reducing downtime by ~30% and improving overall system stability
 - Introduced automated testing, increasing test coverage to ~90% and cutting regressions by ~50%
 - Implemented caching and SQL query optimisation that reduced database queries by ~50% and significantly lowered server load
 - Refactored legacy codebases, reducing complexity by ~30% and increasing feature delivery speed by ~25%
 - Drove code review practice that cut bugs by ~30%, and integrated third-party APIs contributing to ~15% customer base growth
- **BrainPoolTech Pte. Ltd.** **Remote, Singapore**
Back End Engineer *2020–2022*
 - Evaluated and modernised the tech stack, reducing annual infrastructure costs by ~30%
 - Optimised database queries and backend logic, improving response times by ~30% and cutting new-feature implementation time by ~20%
 - Worked cross-functionally with product managers and designers to translate business requirements into technical solutions
- **Cudy Pte. Ltd.** **Singapore / Batam, Indonesia**
Backend Engineer *2019–2020*
 - Designed and built RESTful APIs that increased third-party integrations by ~60%
 - Migrated legacy systems to more efficient technologies and evaluated the tech stack to save ~30% on annual infrastructure costs
 - Built a Telegram and WhatsApp chatbot for finding nearby tutors
- *Earlier Experience* *2015–2019*
 - **Software Engineer**, Infopro Mandiri Solusi, Batam (2019) – built RESTful APIs that expanded integration capabilities and improved API response times by ~20%
 - **Software Engineer**, Tellinet Teramedia Indonesia, Batam (2018) – optimised backend services and database queries, reducing response times by ~30%
 - **Web Administrator**, Little Blue Planet Indonesia, Batam (2017–2018) – managed Active Directory and Group Policy; performance profiling cut memory usage by ~60%
 - **Backend Engineer**, Proweb Media Indonesia, Batam (2015–2017) – built backend services and RESTful APIs for internal products, cutting resource utilisation by ~20%

Selected Projects

- **Government Document System, KSOP Kepulauan Sambu** (2016): workflow application for a government Port Authority / Harbourmaster office.
- **Internal Systems, Bright PLN Batam** (2018–2019): built HSE, billing, and asset-management systems for a state-owned electricity utility.
- **Nodes System, BrainPoolTech** (2020–2022): spatial-data asset-tracking platform for events, real estate, insurance, construction, and government clients.
- **TutorSMS Chatbot, Cudy** (2019): Telegram/WhatsApp chatbot for location-based tutor discovery.

Education

- **Politeknik Negeri Batam** **Batam, Indonesia**
Ahli Madya (Associate Expert / D3 Diploma) in Information Technology *2011–2014*
 GPA: 3.3.

Certifications

- **The Absolute Beginners Guide to Cyber Security 2026** – Udemy Online Courses, April 2026
[ude.my/UC-00937141-1e43-45c5-8ef1-511a37dc0f67](https://www.udemy.com/course/UC-00937141-1e43-45c5-8ef1-511a37dc0f67/)
- **Nest JS Zero to Hero - Modern TypeScript Backend Development** – Udemy Online Courses, January 2026
[ude.my/UC-99b148db-4a66-4af9-ae91-48fdb5fa18bf](https://www.udemy.com/course/UC-99b148db-4a66-4af9-ae91-48fdb5fa18bf/)
- **Foresec Certified in Networking Security (FCNS)** – FORESEC, July 2014.
- **Course Completion (Java Fundamental)** – Oracle Academy, June 2014.

Languages

- Bahasa Indonesia (native), English (professional working proficiency).
